COLLECTION REPORTING TEAM LEAD

SELECT leadership, precision FROM collections_reporting WHERE base = 'Tashkent';

Collections Reporting Team Lead at TBC Bank Uzbekistan, based in Tashkent. Started as a Risk Data Analyst, moved into owning C-level executive management reporting end-to-end, and now leads the collections reporting function — building the internal tools, setting the reporting standards, and mentoring the team. Strong technical foundation in SQL, Python, and Power BI paired with hands-on reporting leadership experience.

WORK EXPERIENCE

Persati Logistics

Financialist

FEBRUARY 2022 – JULY 2023

- Developed and maintained accurate financial records and documents
- Managed accounts receivable and accounts payable to ensure accurate and timely payment of invoices
- Developed internal financial controls to reduce the risk of fraud and errors
- Prepared and presented financial reports to management and stakeholders, providing insights into performance trends and opportunities

Girteka (GBC Georgia)

Internship, SAP ABAP Developer

AUGUST 2023 – DECEMBER 2023

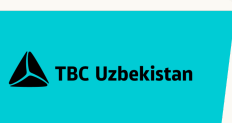

- Developed an SAP Fiori application that enabled customers to access the company's services with a single sign-on

Space International — the Fintech Behind TBC Uzbekistan

Risk Data Analyst → C-Level Executive Management Reporting Data Analyst → Collection Reporting Team Lead

JANUARY 2024 – PRESENT

- **Jan 2024 — Started as Risk Data Analyst:** optimized complex SQL queries, automated daily SSRS reports, and built Power BI dashboards for key risk metrics.
- **Jul 2024 — Moved into C-Level Executive Management Reporting Data Analyst:** owned end-to-end delivery of executive reporting, designed and built an automated reporting pipeline (see Python case study), and introduced a live Slack status dashboard for report delivery health.
- **Jul 2025 — Now Collection Reporting Team Lead, based in Tashkent, Uzbekistan:** relocated to lead the collections reporting function for TBC Uzbekistan, designed and built Control Center (see case study), and leads and mentors the reporting team.

Team Collaboration

PROJECTS

REPORTING & ANALYTICS DELIVERED

- **Auto Collection Share Pipeline** — attributes every loan repayment to its collection channel (direct payment, auto-debit, litigation, etc.) across a SQL Server → StarRocks pipeline feeding a live Power BI dashboard and Slack bots.
- **Portfolio Risk Report** — diagnosed and rebuilt a live reporting pipeline after a data-accuracy incident, restoring trust in a bank-wide risk portfolio dashboard.
- **Collection Vintage Report** — cohort-based loan recovery analysis across multiple loan products, tracking collection efficiency over time.
- **Collections Bonus Calculation** — audited and documented the multi-layer SQL → Power BI pipeline that computes monthly agent bonus payouts, uncovering real calculation bugs.
- **External Agency Recovery Reporting** — built the registry and recurring reporting pipeline tracking loans handed to third-party debt-collection agencies.

Control Center

INTERNAL WEB TOOL

A control-plane web app I built to schedule and monitor collections reporting infrastructure: gates Power BI dashboard refreshes behind live SQL health checks so nothing refreshes on stale data, runs scheduled jobs that rebuild heavy reporting tables from refill scripts, and posts real-time status to a Slack dashboard with automatic issue tracking when a job fails repeatedly.
